Enter factory mode in production line

Simply press the D-mode key on the factory remote handset.

Enter service mode

Press and hold the VOLUME DOWN key tightly on the unit until minimum level and don't release the VOLUMN DOWN key, then press the "0" key on the remote handset three times.

"D" letter on the screen indicated that the factory mode was entered. Now you can use the shortcut key to access the factory menu. All change in factory data will save in EEPROM automatically

Note:

1. You can disable the D-Mode key (on factory remote handset) by change "BIT-0" of "MODE0" to "0". If the D-Mode key was disabled, you can't enter D-Mode by the D-mode key on the factory remote (but you can still enter service mode). It is suggested to disable the D-Mode key before the set leave the factory.
2. On the factory remote handset, you can find the "BUS OFF" key. It can cut off the I²C control from the CPU to other IC. This is only useful when automatic adjustment of white balance.
3. All system data in menu of "key 7" must keep unchanged when servicing. Otherwise, the set may not work properly.

Setting method:

No	Adjustment Items	Data Name (default value inside blanket)	Conditions and input signal	Setting method (need enter D-mode)
1	Screen voltage	-----	"IRGB cut off" must set to 80 (all pattern)	● Press "-/--" key on the remote handset and the screen will become a horizontal line. Then adjust the "screen" VR on the flyback until the horizontal line can just be seen (minimum visible intensity).
2	Focus voltage	-----	Cross hatch pattern.	● Adjust the "focus" VR on the flyback until the screen becomes clear.
3	VCO	-----	Apply an IF signal (see tuner spec. for frequency) to the IF input.	● Monitor the DC voltage at pin 48 of IC201, then adjust T271 until the voltage at pin 48 become 4.62 +/- 0.02 V. ● Press the AFT button on the factory remote and AFT adjustment will be done automatically.

Receive pattern of cross hatch with black background and then change to white background, then compare the vertical and horizontal size between black and white background. Adjust VEHT and HEHT until you get the minimum difference of screen size. After you adjust VEHT and HEHT, you must re-adjust vertical and horizontal amplitude.
7	Horizontal geometry for NTSC system (Key 5)	HPOS60 (14) HSIZE60 (18) PARA60 (1A) TRAP60 (0D) CORN60 (0D) VEHT60 (02) HEHT60 (04)	Input a NTSC cross hatch pattern with black and white background.	<ul style="list-style-type: none"> ● Adjust HPOS60 for horizontal position. ● Adjust HSIZE60 for horizontal width. ● Adjust PARA60, TRAP60 and CORN60 until the vertical line at left and right side of the picture become straight. ● Adjust VEHT and HEHT using same method of PAL system.
